**Summary:**
Diligent student seeking to acquire advanced experience in Software Engineering. Dynamic programmer who has worked extensively with Java, Python, JavaScript, HTML, and CSS. In-depth experience leading, planning, and executing the development of complex projects and web applications. Especially excited to learn and enter AI\ML spaces.

## EDUCATION

**University of Texas at Austin - Computer Engineering** **Present – May. 2029**
**Seven Lakes High School** **Aug. 2022 – May. 2026**
*Relevant Coursework: Computer Science Independent Projects, Data Structures and Algorithms, AP CSA, AP Calculus, AP Precalculus, Kap Algebra 2, AP Macroeconomics*

## EXPERIENCE

**Computer Science Tutor** **June. 2025 – Aug. 2026**
*Code Ninjas West Katy LLC* *Katy, TX*

- Instructed students in programming fundamentals using JavaScript, Python, and Scratch, guiding them through interactive lessons and hands-on coding challenges.
- Facilitated creation of many student projects, including games and web applications, resulting in problem solving improvement and mastery in core programming concepts through completed projects.

## PROJECTS

**Smart Sizer App (Python, React, FastAPI)**

- Engineered a full-stack ML application that estimates the volume of real-world objects from a photo, combining a computer vision pipeline (OpenCV, rembg) with calculus-based volume integration using the disk and washer methods
- Designed and deployed a REST API using FastAPI to serve model predictions and built a responsive React frontend with drag-and-drop image upload and real-time volume output in $cm^3$ and $in^3$.

**Code Ninjas Code Tracker (TypeScript, HTML, CSS) | 30+ Users**

- Collaborated with coworkers to streamline how student progress was tracked and reported, improving efficiency for instructors and organization for management.
- Designed a simple and intuitive UI using HTML and CSS with dropdown menus for easy navigation and implemented TypeScript logic to automatically populate progress data based on user selections.

**Premier League Match Predictor (Python, Docker)**

- Collected and cleaned Premier League match data from an external API, constructing features such as team form, goal differentials, and head-to-head performance.
- Trained and refined a model to predict match outcomes, evaluating performance with historical data and adjusting inputs based on prediction error.

## EXTRACURRICULARS

- **Seven Lakes Student Council** **Jan. 2024 – May. 2026**
  - Contributed 75+ volunteering hours to community and school events, such as Winterfest at Randolph Elementary, directly impacting hundreds of students and communities through garnering charity donations.
- **Robotics (Programming Team Member)** **Aug. 2022 – May. 2026**
  - Developed and implemented control mechanisms for a state-level robotics competition, focusing on precision, efficiency, and reliability.
  - Applied programming and problem-solving skills to optimize robotic performance, contributing to the team's success.
- **All Star Code Graduate** **May. 2024**
  - Used HTML/DOM/JavaScript to build a personal website; learned efficient coding techniques and collaboration.
- **College Board: AP Capstone Diploma, AP Scholar with Distinction Award**
